

1 pretty solid. Solid as you're going to get a total
2 cyanide result.

3 Q. Okay. Now, if you do a split sample and
4 another lab comes back with a value that is above
5 your permit parameter, what do you do with that
6 value?

7 A. It's in the DMR.

8 Q. So it's reported in the DMR?

9 A. It's reported right here. All values are
10 reported here. We don't withhold any values.

11 Q. When you're saying "here," what are you
12 referring to?

13 A. The DMR.

14 Q. The narrative portion? The letter portion?

15 A. Sometimes it's in what -- the portion of
16 the DMR we call the cover letter. Sometimes it's in
17 tables as attachments. Generally is here, but it can
18 vary. All data is reported. We don't hold back any
19 data. We report it all.

20 Q. Okay. So the cover letter, the forms and
21 the attachments are all part of the DMR?

22 A. Yes.

23 Q. But I guess my question is: You said
24 the -- since 2003, you were reporting in the forms
25 part the values from NCA.
